Big Carnival In Medicine Hat October 1, 2, 3

Special Door Prizes Given Away
Thursday and Friday

Medicine Hat Rotary's annual Carnival is being held on Thursday, Friday and Saturday, Oct. 1st, 2nd and 3rd in the big arena.

A fine 1936 Terraplane will be given away as the big capital prize and there are several other consolation and door prizes. We draw attention to an error made in last week's ad. in the Review in connection with the \$50.00 door prizes. These prizes are to be given away on Thursday and Friday and not Friday and Saturday as stated in the ad. last week. Keep this in mind and be on hand Thursday and Friday for these special prizes.

The carnival this year promises to be one of the best yet and as the funds are used for community purposes, some of which has been contributed to Redcliff in the past, it is hoped our citizens will patronize the event.

At the district court sitting in Medicine Hat, Judge Jackson of Dalhousie announced that he had been instructed by Attorney General Flagg to take charge of the district court of this district until other arrangements are made.

A brief survey of wheat marketing in Western Canada over the past nineteen years is contained in a booklet issued by the Alberta Wheat Pool entitled, "The Need For A National Wheat Board". This pamphlet will be mailed free to any person interested. Please write the Publicity Department, Alberta Wheat Pool, Calgary.

It might be noted here, too, that the Saskatchewan Wheat Pool estimates wheat production in that province this year a 106,916,000 bushels. The Dominion government's estimate is 117 million bushels.

Price levels not seen since 1930 were touched on the Winnipeg grain exchange on Monday as futures prices responded briskly to week-end export sales of 7,600,000 bushels. Values closed 2 1/2 to 2 3/4 cents advanced. October's final quotation was \$1.09 1/2 and May \$1.08 1/2.

Italy and Japan were among the countries bidding actively for the Dominion's chief commodity.

Gordon Memorial to Celebrate Anniversary

Special Services Sunday And
Supper Monday

This coming Sunday the members and adherents of Gordon Memorial Church will unite to celebrate the Fifteenth Anniversary of the first opening of their Church.

It is fifty-three years ago since services were first given to Redcliff, by the Methodist and Presbyterian Churches, yet there wasn't a Church Building until 1910, when the first Church Building, now the Catholic Church, was erected. This provided a small for the congregation, and in 1919 the present Church building was commenced and opened on Oct. 19th 1921.

During the past fifteen years ministered to by a splendid type of leadership a loyal congregation has carried on the Church work, and especially during the past five or six years in face of some of the outstanding members and families moving away or being called to their well-rewarded and increased employment in the town, have in a commendable and sacrificial way kept the home fires of their Church burning.

On Sunday special services have been arranged to commemorate the anniversary.

In the morning the Junior Choir will be assisted by a duet rendered by Messrs. B. Thacker and J. Hitchin, and a solo by Mrs. B. Thacker. In the evening the Senior Choir will give special music.

The minister will give two challenging addresses in the morning dealing with the type of persons, and Organizations, that would close the door of the Church, and in the evening, the type that would keep the Church open. Come and support these services.

On Monday from 5.30 p.m. to 7.30 p.m. the Ladies Aid will put on their annual supper.

Last Sunday night, Miss E. L. Eason, school teacher from Glenora, met with an auto accident while nearing Redcliff. A horse ran across the road and was hit by her car turning her over in the ditch. Miss Eason and her companion were picked up by a passing car and taken to Medicine Hat. The circumstances were not seriously hurt, but the horse died, apparently from a broken back. We were unable to find who the owner of the horse was.

A SAFETY FIRST FARM

Here's a safety first farm:

An acre or two of garden, surrounded by a carter's hedge, with higher trees inside, and with fruit bushes inside, the garden measured and summer-fenced each year.

A few suitable milk cows of a type whose calves may be entered along to provide a winter beef supply.

A flock of good chickens. Enough hogs for the farm use at least.

A dependable water supply. A well isn't handy, a cistern may be dug and cemented, with pump inside the kitchen if possible.

A stockwater supply, made by means of a dam draining some sewage, probably of "pasture."

If possible, a few acres of alfalfa irrigated from the reservoir formed by the dam. An acre of alfalfa irrigated area to be given over to potatoes and the "large vegetable crops."

A good road cellar. If the irrigation is impossible, a few acres of erected best grass in rows for hay.

A small field of corn to be left as winter browse for the livestock.

A carry-over of two years' seed supply.

There are a lot more things, but these are all possible on a Southern Alberta farm. When these have been provided, as far as you like, in relation to what you're able to handle, you'll be able to handle them if the crop fails.

Lethbridge Herald.

During the past week the Town Hall has been moved to the new quarters in the old Town Hall or Third St. The building has been renovated and conveniently arranged to make more commodious quarters for the transaction of town business.

The Alberta Wheat Pool estimates wheat production in the province of Alberta this year at 117,000,000 bushels, which is an increase of 8.5 bushels per acre. This compares with the government estimate of 68,200,000 bushels.

GORDON MEMORIAL

Church in which anniversary services will be held next Wednesday, and annual supper on Monday.

The same sense of justice, freedom and respect for law and order that built up the British Commonwealth of nations is needed in the world today to prevent wars, Lord Thackerston a member of the private council in London told a luncheon club.

"Look at the carnage in Spain the Ethiopian war, the utterances we see in the papers. Are they consistent with freedom?" Lord Thackerston asked. Until nations, large and small and bullying nations had a respect for justice there could be no lasting peace.

Churches

ST. MARY'S CHURCH
Mass will be celebrated on the 3rd Sunday of each month at 8.30 a.m.

ST. AMBROSE CHURCH
Rev. H. S. Hammett, Vicar
6th Sunday after Trinity Sept. 27th.

11.00 a.m. Holy Communion
7.30 p.m. Evensong
Mr. Thomas will be in charge of the evening service, for the last time, as the college opens on Wednesday next and Mr. Thomas must return for his last year terms.

GORDON MEMORIAL

UNITED CHURCH
Rev. H. V. Ellison, Pastor
Anniversary Services morning and evening.

Annual Supper will be held on Monday evening.

TWO KINGS MEET INFORMALLY

His Majesty King Edward VIII at Sofia, being escorted from the railway station by King Boris of Bulgaria.

Annual School Sports Here Next Wednesday

Will Be Held on The Stampede Grounds at 2 P. M.

The third annual school sports will be held at the Stampede grounds next Wednesday, Sept. 24th.

This year the "Snale" in the school grounds, so that spectators will see only races and overtly stunts at the track here are twenty racing events, all ranging in length from the small girls 40 yd. dash to the high school boys one mile run.

Students placing first, second and third are given a red, blue and white ribbon respectively. All competitors who grade over a certain average in all four events are presented with a celluloid badge bearing the words "Redcliff School" qualified athlete.

The champion athlete of the school gets a silver medal and wins the Dominion Glass Company shield for the room.

After the races which commence promptly at 2 p.m., there will be tug-of-war competitions, team battles, and a long 440 yard relay race.

A silver collection is taken to defray expenses of prize ribbons and badges.

Hard For Foreigners To Get Naturalized

Must Pay Their Relief Before Getting Papers

Foreign born residents of Alberta who fail to pay back relief, granted by a city or municipality, will not be eligible for naturalization as British subjects in future, Mr. Justice T. M. Tweddle said in Supreme Court chambers in Calgary.

"We are not going to feed people from Europe when we have our own to feed," he declared. Aliens he added, would not be permitted to take jobs "out of the mouths" of Canadian-born British-born residents. Mr. Justice Tweddle stated some applications for naturalization were being held up until it had paid off relief charges.

There are a number of new ads. in the Review this week. Look them over. They will help you to do your shopping. Also turn to page 4.

LOOK THEM OVER

Glass Plant is Now Employing A Record Staff

Four Large Machines Operating
Night and Day

During the past few months the Dominion Glass plant here has been one of the busiest in the west. At the present time this plant has the largest staff it has employed since it commenced operations several years ago.

Since the large new furnace has been in operation and equipped with all modern inventions and conveniences for big glass making, machines have been in operation twenty-four hours a day and turning out a fine quality of all kinds of glass ware from the smallest drop bottles to large gallon jugs.

Orders appear to be coming in rapidly and prospects are most promising for a busy fall and winter season.

Glass containers are being used more now than ever for the holding of fruits, vegetables, meats and groceries and the demand is growing rapidly.

National Peace Week To Begin Nov. 8th

Churches and Schools Asked to
Arrange Programs

"National Peace Action Week" during which churches will be invited to organize special services, while schools, clubs and other interested organizations will be asked to plan programs designed to stimulate interest in international affairs, will be observed the week beginning Nov. 8, it was announced by the name of Nations Society in Canada.

The decision was made at a meeting of the National executive committee.

Ranchers and farmers in the vicinity of Seven Persons Creek, which run into Medicine Hat from the south, organized themselves into a Water Users Association. C. W. Moore, the prominent engineer, said that the proposed scheme would bring 2,000 acres under the water service. This would include land from the headwaters of a creek to the city limits of Medicine Hat.

The local Legion dance has been postponed till Oct. 9th.

A Quid Pro Quo

If the Dominion government is to open the gates after for the admission of more British migrants to Canada on a colonization basis, it would seem appropriate to suggest that any agreement which may be made should include some provision for the sale of more Canadian produce in the Old Country.

From the viewpoint of Western Canada where new settlers must necessarily engage in a competitive venture with farmers who, in recent years at least, have been forced to offer their wares in narrowing markets, such a proposal would only be a reasonable quid pro quo for securing new settlers.

It is true that colonization schemes in general and the Hornby scheme in particular, which are not being modeled and are apparently being accorded serious consideration in some quarters, contemplate safeguards to ensure that for at least five years after admittance to the country migrants would not become charges on the government and that failures would be returned to the country of their origin.

While this may be regarded by some people as satisfactory on the face of it, such safeguards are not sufficient for the protection of thousands of farmers in the prairie provinces who during the past five or six years have not only experienced the greatest difficulty in making a bare livelihood but have had the misfortune to stagger—and are still staggering—under an accumulating burden of indebtedness.

Such colonization schemes, insofar as the west is concerned, have had settlement as their objective which means, of course, that the newcomers will be engaged in the production of agricultural commodities. If they are successful in their efforts the volume of produce offered for sale must necessarily increase with a resultant tendency to reduce returns to all producers of similar commodities.

The only way that this trend can be offset is the creation of new or expansion of existing markets for such produce and the latter might be attained by agreements which will ensure a greater volume of sales of Canadian farm produce in the country from which these migrants came. Such agreements, if consummated, coupled with rigid guarantees that the new settlers will be self-supporting, might be expected to at least minimize any indirect loss while the older settlers would sustain as a result of ensuing competition.

New Zealanders, who have been sounded out on the subject of British migration to their country have something of the kind in mind, as evidenced by the report of William G. Gardiner, secretary of the New Zealand Colonization Commission to examine opportunities for British settlement in the two Antipodean countries for, with respect to New Zealand, he is quoted in a recent issue of the London Times as stating:

"From both these Dominions I came away with the impression of young people in young countries convinced of the future of their race, convinced that they had something to interpret from the West to their neighbors in the Far East, and convinced that they still had a lot to do in their own countries before they were ready to admit too many strangers. They seemed, however, quite willing to admit a few under careful and proper auspices."

"It struck me that the best opening was in New Zealand, and that there it could only be achieved through the New Zealand Government (not large body being sufficiently interested) and by a definite economic bargain for the purchase of New Zealand goods."

Without going into details of the reasons advanced, Mr. Teeling found that prospects for British migration to Australia were generally hopeless at the present time.

Thus it would appear that any British colonization in New Zealand must necessarily be very limited and must be accompanied by an economic pact as a consideration. It is suggested that should certainly be given great weight by Canadian authorities before any agreement is entered into for additional colonization in this country.

Proponents of further colonization in this country have argued that new settlers are consumers as well as producers. This is true, but if they are to be successful they must produce more than they consume, in which event a market must be found for the excess production somewhere. If they do not produce more than they consume, colonization is for them a failure and it would be better for them and the country, if the scheme were abandoned before birth.

Professor Makes Discovery

Finds Green Peppers Contain The Freedom Vitamin

The green peppers of Professor Albert Alberti, of the University of Hungary, appeared at dinner one night gave him the chief reason for his discovery. C. C. had bought for a long time.

On that particular evening his wife had cooked her dinner in a few hours work, and he retired to his laboratory to continue his hunt for the anti-cancer vitamin.

He took the peppers with him, intending to eat them later. But it turned, he subjected to a very long fast as he had almost everything else available—and found what he wanted in the vegetables that abound in the neighborhood.

In a few weeks he managed to produce a pound of pure vitamin C from 4,000 pounds of green peppers which, he discovered, have four times the vitamin C content of oranges and lemons, and are cheaper.

Government Closes Mint

Expects To Recover Large Amount Of Gold Dust

Housecleaning may mean dust and dirt to most people, but it means gold, running in thousands of dollars, for the Royal Canadian Mint at Ottawa. When the smelting furnaces at the mint are ready to be re-opening, officials of the institution where all Canada's coinage is made and all gold handled, will thoroughly clean the rooms being vacated. According to J. C. Campbell, master of the mint, it is expected that a very large amount of gold will be recovered in the process of cleaning the floors, ceilings and walls.

This reclaimed gold in hundreds of billions of tiny particles which have been carried off by smoke and gases from the huge smelting furnaces, which eventually come to rest on the walls and floors of the rooms.

Manufacturers Wind

Full-size aeroplanes can now be fully tested before being actually flown, in a wind-tunnel at the Royal Aircraft Establishment at Farnborough, England. In this huge apparatus wind up to 115 miles per hour can be manufactured to order.

Wonder House On Exhibit

Everything Electrically Operated In House

Ease and convenience for persons lacking domestic servants and spare time were revealed in a "wonder house" on exhibition at New York.

There was an electric range which turned itself off when a roast was cooked, a refrigerator that opened without being touched to admit housewife with armfuls of dishes, and illuminated by hundreds of hand-lamps serving home life after late meetings.

In the nursery an electric eye set off a siren, which when anyone approached the baby's cradle, and a burglar alarm buzzed when the window was open, the results were made it difficult for kidnappers.

When closed doors were opened, lights immediately flashed on inside. An electrically-operated golden bowl with floodlights and an underwater air fountain required only one change of water each month.

Another Mystery To Solve

Reason Silica Turns Into Poison When Pulverized

Science has one mystery yet to solve in silica, the most dangerous of all dusts, which when pulverized turns into a deadly poison. The mystery is why silica, the dust responsible, turns into a poison when ground to particle size of bacteria. The surprising behavior of silica was explained at the Harvard symposium by Dr. W. Irving Clark and Prof. Philip Dinkler at the Harvard school of public health.

Beach sand is almost pure silica, silica is part of the beauty of opals and occurs in quartz, flint, gneiss, jasper and many other common substances. In all of them it is harmless to human beings. When ground fine enough to fly in the air particles of silica cause a distinct, new lung disease.

Three breaths through tiny openings on the under side of their leaves. A single apple leaf has more than 1,000 of these pores.

Our idea of the usefulness of things is for a motorcycle policeman to stop a motorist driver for making too much noise. 245

WAKE UP YOUR LIVER BILE—

And You'll Jump Out of Bed in the Morning Ready to Go

The liver does not get out two pounds of bile every day and you know it. If this bile is not used up by the time you wake up in the morning, you will feel tired and sluggish. You will not be able to get up in the morning and you will not be able to get on with your work.

A more recent advertisement doesn't tell you that the liver does not get out two pounds of bile every day. It tells you that the liver does not get out two pounds of bile every day. It tells you that the liver does not get out two pounds of bile every day. It tells you that the liver does not get out two pounds of bile every day.

Used To Motor Cars

Reason So Many People Have Never Ridden On Trains

Every once in a while somebody—much more frequently than in the past—stories appear in the newspapers about passenger trains, the service they give and the people who ride on them. And in some of these stories the fact is mentioned that many people are riding on trains for the first time in their lives.

These people aren't from any backwoods region, either, where a train would be something of a curiosity. They are from towns and cities, and in the course of their lives have frequently watched trains go by, possibly able to the station to welcome friends. But they have never been riding on a train themselves, and the reason is that they're young people, born since the day the motor car displaced the train as the chief means of travel.

People who have never ridden on trains are not common in Port Erie. There are 600 many railroad people here, and railroad men and their families get passes when they want to travel. But in other towns, where the railroads aren't a leading industry, it is not an uncommon thing to find many of the younger generation who have done all their traveling by car or bus.

Now, however, train travel is becoming popular again, and the next generation may be more train-travelers. The railroads are responsible for a great revival of interest in their trains. In the last two or three years they have published their streamliners, made much of their new service, and worked hard to eliminate the attitude of unconcern maintained toward the public by the railroads a few years ago.—Port Erie Times-Review.

Aks Farmers To Co-operate

Eastern Cattle Men Urged To Aid Federal Plan

Hon. J. G. Gardiner, minister of agriculture, made an appeal for the co-operation of farmers of eastern Canada in the government's efforts to aid cattle breeders in the drought areas of the prairie provinces. He was addressing the cattle exhibitors at the Central Canada exhibition in Ottawa.

"I am told that here in the eastern area, between this district and the mountains there is an abundance of roughage food," Mr. Gardiner said. "It is a pity we are not able to utilize it as we are not able to pay the cost of our plan. But this plan will not be for the benefit of the eastern farmers alone, while the cattle men will be able to pay the cost of the plan."

"And if these cattle after buying roughage food are fed for three months, the government will refund the freight paid to bring them here. There is a direct benefit to come for those who do take the cattle for feeding."

Japan's Low Labor Cost Enables Them To Underbid Other Countries' Home Products

The St. Catharines, Ontario, Standard says a copy of the Kait Gotoh, U.S.A., received in Japan, contains an article which shows that cotton harvest in Japan is making tremendous strides in the market to the South. It is shown that if the tariff were raised fifty per cent, to what it is now, Japan could undercut the home product by 35.6 per cent, all due to a low labor cost of the Japanese. Male factory workers in Japan earn \$2.80 a week and female \$1.25. That is the story behind the industrialization and world market drive of the Japanese manufacturers.

A Scot entered the shop where he had recently bought a bicycle. "It's about the bike, son," he said. "Haven't it arrived yet?" said the shopkeeper.

"It has," said Jack, "but where's that free wheel?"

Apples, peaches, pomegranates, and oranges were referred to by the ancient Romans as "exiles." They distinguished the fruits by the names of the countries where they were grown.

Not Very Long Ago

Boston Had By-Law Forbidding Basting Without Owner's Order

Cleary Anglo-Saxons on both sides of the Atlantic have been shocked at the revelation, by an American plumber who has just returned from a European tour, that though the Hohenzollern Palace at Potsdam contains 600 rooms, there are only two bath-rooms in it. And the plumber found, also in Germany, a castle of 200 rooms which had no bath-room at all.

But there was a time when the Boston city fathers passed a by-law forbidding anyone to have a bath except by doctor's order, and when the Lord Mayor of London asked for a shower bath to be installed at the Mansion House the request was refused, as the need of same had not been heretofore complained of.—London Answer.

Building Without Stairs

Will Have Ramps So Car Can Park On Any Floor

Hotels and offices in which cars can drive to any floor and houses in which one can reach the top stairs, are being designed in London. The buildings will have ramps, like those in some large garages. The young designers claim that their plan will do away with traffic congestion, make it possible for dwellers to drive their own cars to any building and park them outside their doors, make roofs into car parks, and provide covered ramps. The architect, Dr. M. Hooley, already buildings on his principle are being put up in Leeds, England and in France. The Leeds building will contain a 150 bedroom hotel, a 170 car garage in the basement and a motion picture theatre. Cars can be driven right into the building, ascending to any floor.

Little Animal Has Courage

Man Tells How Gopher Rescued His Helpless Mate

The gopher, unassuming and somewhat pitiful animal, attains heights of courage in the face of danger. One name, says A. D. Bain, superintendent of a chain of bungalow camps in the Canadian Rockies.

On a recent inspection trip, Bain saw as he approached in his car an injured gopher lying helplessly in the middle of the road. Nearby stood another of the little animals, bristling and showing his teeth, although apparently frightened.

When Bain stopped the car, the second gopher put his teeth into the scruff of his dying mate and dragged her to the safety of the long grass beside the mountain road.

Lightning Kills Birds

Found Underneath Large Tree Which Was Not Struck

Included among the freaks of the severe lightning storm which struck Raleigh, North Carolina, was the electrocution of between fifty and sixty sparrows roosting in a tree which was not struck by lightning. The sparrows were found lying in the large tree. Since the tree was not struck it is believed the heavily charged air, coupled with the rain, resulted in lightning in the vicinity, resulted in the electrocution.

Given Excellent Results

Excellent results from blood-testing poultry flocks are reported from all parts of Canada. A breeder in British Columbia who had his flock blood-tested last fall at a cost of \$10 sold hatchery eggs to the value of \$608 to one of the commercial hatcheries. At a sale of Record of Performance certificates by an Ontario breeder to a breeder in the United States, R.O.P. certified flocks were sold for \$5 each and an R.O.P. male for \$15.

A minister discovered a species in India that resembled mules and, by cross breeding, made the plants of this continent.

After 400 years, one of the best-known "ports of call" along London's waterways, The Temple Head, Tin, Wapping, has been closed.

"The Object of his Affections"

You said it—Ogden's Fine Cut! Men who roll their own cigarettes have a yen for Ogden's, because Ogden's does roll a cooler, sweeter, smoother smoke. If you're not already acquainted with Ogden's, take a little tip—try this mild, fragrant cigarette tobacco. Yes, sir, you'll like Ogden's Fine Cut and you'll like the way it's packaged, too—Cellophane wrapped with the purple easy-opening ribbon. Be sure to choose the better papers—"Chanticles" or "Vogue".

OGDEN'S FINE CUT

P.S.—Your Pipe Knows Ogden's Cut Pipe

SELECTED RECIPES

PUMPKIN PIE
1 1/2 cups pumpkin
1 dessertspoon flour
1 cup sugar
1 teaspoon ginger
1 teaspoon cinnamon
1/2 teaspoon nutmeg
1/2 teaspoon mace
1/2 teaspoon salt
3 eggs
1/2 cup milk
Mix pumpkin, flour, sugar, spices and salt together; beat eggs; add milk and stir all well together. Pour into a deep pie plate lined with good pastry. Bake until firm (about 30 minutes) in a moderate oven.

Just Recently Known.
Twenty-five per cent. of the vegetables and fruits people eat were unknown even ten years ago. They come from strains of plants that didn't exist a decade past. Cantaloupes, for instance, a popular item on many tables. A few years ago it was scarcely possible to produce them because they were afflicted by a mildew disease.

A scientist discovered a species in India that resembled mules and, by cross breeding, made the plants of this continent.

After 400 years, one of the best-known "ports of call" along London's waterways, The Temple Head, Tin, Wapping, has been closed.

Hundreds Of Suggestions

Lord Mayor Of London Receives Ideas For Memorial

Several hundred suggestions for a King George Memorial have been received by the Lord Mayor of London and he and the King George Memorial Fund is considering them. Among them are renaming Trafalgar Square, King George Square, removing Nelson's Column and the Horse to Tower Hill, erecting statues of King George and his four sons, and placing the Cenotaph in the centre of the square are some. A food-lift monument in Hyde Park is another. The erection of a colossal food-lift statue on the cliffs of England, near London, similar to the Statue of Liberty in New York, viable at sea for 20 miles, is still another.

Has Supply Fingers

Leo M. Stender, of Winters' Union, No. 16, of New York City, by the genius of his supply fingers, can produce, at a moment's notice, from a plain table napkin a habes's mitre, a wedding canopy, a saltbox or a crown grinning under a fool's cap. He demonstrated his prowess recently before a meeting of the Hotel and Restaurant International Alliance in Rochester, N.Y.

"According to a correspondent of Collier's, an undesirable alien is a foreigner who makes more money than he does."

Windmills Fight Fires

Forest Ranger Determines The Humidity Thus Aiding Lumbermen
Don Quixote used to fight windmills, but rangers of the United States Forest Service used windmills to fight fires in the wooded regions east of Seattle during the warm, dry season of the year when forest fires are a constant menace.

Norman McCausland, formerly of Seattle, is one of the rangers. He does the fighting at the Skyway ranger station. The windmill he uses has four curved blades and is mounted on a four-foot pole. It is used to determine the ground wind velocity. The windmills at the various ranger stations are placed at least 100 feet from the nearest building to permit the full force of the wind to strike them.

When McCausland wants to find out what the "wind mileage" is he counts the number of buxins emitted in ten minutes by a buzzer attached to the windmill.

During fire season McCausland has as part of his equipment a large block of wood which represents standing timber, and a framework of several small pieces of wood, representing slashings. He weighs each several times daily to determine the difference in moisture between the different periods. He finds the average humidity for the day by measuring the difference between the readings on a barometer with a "wet bulb" on the end of it and a dry barometer.

Every day the logging companies telephone the ranger station for the readings. When the humidity gets too low they have to quit work for fear of friction caused by the rigging dragging in logs is likely to set fire to them—the things rangers fight to avoid.

Any kind of operations in the woods are extremely dangerous when the humidity is low and there is a strong wind blowing. That is the worst time of fire season, when any one within reach may be called in to help fight the fire if the rangers are short handed.

Earth Gradually Cooling

Is Becoming Smaller Than It Was
No Less

You will probably be surprised to find that the world is becoming smaller! But this is the fact because of the world's contents; this decrease in the earth's area does not affect the countries or continents. A sea-washed land may gradually lose part of its shores, but even then it has been taken out of the world.

That the world is becoming smaller really means that the world as a whole, including the sea, is becoming less in size. This is due to the gradual cooling of the earth as it travels through space, as it has done for many centuries.

Notice that when a piece of iron is heated it grows larger, then, when it cools again, it becomes considerably smaller.

That is just what is happening to the world, only the heat started its cooling by being set on fire.

As the earth travels through space it passes among numerous meteors, and sometimes a number of them will bury themselves in the earth, thus maintaining its weight.

Senseless Wrangling

Wears Down Nerves And Lowers Resistance To Disease
The Medical Research Council has issued a report which seems to indicate that men and women can be neglected to disease. Resistance to disease sinks when nagging wears down the nerves. This is no news to the unfortunate people who have suffered under the scourge of a nagging tongue. An intelligent argument is a stimulant. But the senseless wrangling that is so too frequently a part of our private lives is a menace that saps the nerve of the arguer.

She: "My father gave me a dollar every birthday."

He: "How much have you got now?"

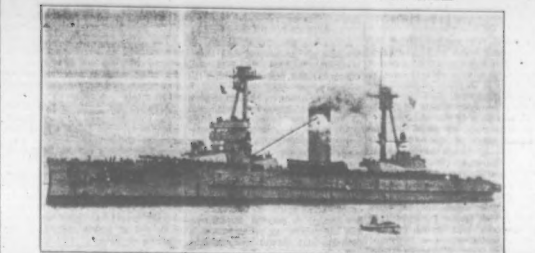

"Seventeen dollars."

"How much does he still owe you?"

The Pilgrims first called cranberries "devil's food," because when eaten raw, the fruit puckered the mouth. The Indians taught the settlers how to make cranberry sauce.

The Japanese alphabet possesses two sets of characters—katakana for the use of men, and hiragana for women.

SPANISH BATTLESHIP LEMPS INTO HARBOR AFTER BEING BOMBED

With a great hole in the forepart of the boat, the Spanish battleship Jaime I limps into harbor at Cartagena for repairs at the arsenal after being bombed by rebel aircraft in Malaga Bay.

Dogs Can Detect Fear

Know By Instant Even If Timidity Is Concealed

The following interesting article is from "My Friend the Dog" by Albert Payson Terhune:
Years ago, I used to visit a neighbor whose gigantic cross-breed had been a great pal of mine. I went away for almost a year. On my return I called on this neighbor one evening. His huge dog came bounding down the path. I sloped over and rumbled his ears roughly between my hands. Hide by side we went to the house. He lay down on the porch, while I went indoors. My host greeted me by saying he hoped his dog had been chained, as the brute was miserably out of shape.

While I was away his big cross-breed had died and he had bought another watchdog. This was the giant that had greeted me. My host could hardly believe the dog had permitted such liberties. To prove it, I stepped out on the porch where the new dog lay. By the light from the window I could see what a mail-chicken he was. And I was scared. Yet I went toward him with outward calmness, as if he had been a friendly friend.

He caught himself at my throat with a wild roar. I barely had time to catch him by the side of the neck as he leaped. Now that he knew I feared him he attacked me. Yet I can swear no more human would have guessed I was afraid. His nostrils told him of my fright.

I think the total absence of fear-scent explains why so many little children are gentle with little dogs. Some people "have a way with dogs" and can do almost anything with most of them. Other people are invariably disliked by dogs. If they don't like you, have them alone. If they do like you, don't be fooled by the old theory that a man is to be trusted if dogs like him; and vice versa. That is the most ridiculous of all dog lore.

Banks On Ocean Liners

Are Not Profitable Only Through Contacts They Make

Those who have "crossed the pond" in the large steamers and who have given any thought to the matter, have been puzzled by the banking service afforded. Where, they ask, does the bank make its profit on the relatively small amount of business to be obtained, and in the absence of loan commitments?

The answer appears to be that it doesn't—at least, not directly. Apparently, the profit in maintaining ocean liner banks lies mainly in contacts. And the fact that the offices have survived for many years indicates that the tangible return arising from the intangible "connections" is a worthwhile source of income.

On board the Queen Mary, the Midland Bank, three well-equipped offices, one each for cable, tourist and third class. In these offices travelers' cheques and letters of credit are cashed, foreign money exchanged, and cheques drawn against current account.

At that, the life of a bank manager on any of the large liners might be considered one of the cushiest jobs—for a good sailor—Financial Post.

Modern Invention

"Traveler: 'Porter, I want to be called at 3 o'clock in the morning.'"
Porter: "Oh, yes, as you wish, but I ain't acquainted with these hush modern inventions. See this hush button, hush? Well, when you call, you just press down, hush? As we comes at calls you."

Only about one American male of every 200 attains a height of six feet.

How Not To Grow Old

If Rules Are Followed Success Is Almost Sure

How to keep from growing old: Always race with locomotives to crossings. Engineers like it! It breaks the monotony of their job. Always pass the car ahead on curves or turns. Don't use your horn; it may unnerve the other fellow and cause him to turn out too far. Demand half the road—the middle half. Insist on your rights.

Always speed; it shows people you are a man of pep, even though an amateur driver. Never stop, look or listen at railroad crossings. It consumes time. Drive confidently, just as though there were not eighteen other cars in service.

Always look your brakes when skidding. It makes the job more artistic. Always pass cars on hills. It shows you have more power; and you can turn out if you meet a car at the top. In sloppy weather, drive close to pedestrians. Dry cleaners appreciate it.

Never look around when you back up. There is never anything behind you.

Always drive fast out of alleyways—Dunsmuir Chronicle.

One More Pair

She was one of those women who want to see everything there is in the shop. She was looking for shoes, and the obsequious salesman got down everything in sight within a radius of half a mile.

After the customers had been strewn with hose of every size and shape and color—both on box, down on floor—he said: "There, madam, is our stock."

"Is that all you have?" asked the woman, her voice showing disappointment.

The salesman paused.

"Yes, madam," he replied, "except the pair I've got on."

Responsible For Decorations

The man who is to be responsible for the street decorations at the Coronation, O. G. Wormum, is known to Londoners chiefly as the architect of the striking R.I.B.A. headquarters in Portland-place, opened by King George 16 months ago. He is in the middle forties, but an eye in the war, and wears a monocle. His American wife is herself an expert interior decorator, who paints in summer and writes detective stories in winter.

Somebody defines a genius as a person whose mind doesn't go blank when he's asked to write something original, although he's no damn good. You should see some of the stuff alleged geniuses write there.

Insects were responsible for the loss of one-fifth of the apple crop, one-tenth the wheat and one-third the potatoes grown in Germany in the last year.

"THEY BOYF PEDAL THAT. THEY CAN'T HEAR ME."

Speed Holiday In England

Greatest Number Of British People Stay On Island

The London Observer estimates that twelve million persons more than a quarter of the total population of Britain—were on holiday this summer. This high ratio is the more surprising in that only one person in 21 owns his own car and as the great things are dependent, except for their fleet, upon facilities offered by railway companies, buses, coaches, boats, etc. The whole country must have been in holiday mood; for one-fourth could not be moving in that spirit without sharing it with the entire population. Even the King was "on holiday."

And where do they go? Those who make it a Continental holiday go in vast numbers to the Belgian coast ("once the devastation of the Belgian frontier"). Swiss holidays too are cheaper than last year and at great good numbers. "Germany is popular with British travellers."

Italy is regaining its popularity. The Mediterranean has become of disturbed conditions has been disturbed. The Mediterranean has become of disturbed conditions has been disturbed. The Mediterranean has become of disturbed conditions has been disturbed.

But for the greater part of the millions they find their joy in the light little island and its attendant life, every foot of which is within easy reach of the sea, and of little and value. The explanation of much moving to and fro is to be found not only in their enduring appeal but in the greater freedom of the multitude to respond—because of the greater national prosperity, the reduction of unemployment and the fact that there is more money in circulation and "in more hands"—New York Times.

Amateur Tree Trimmer

George Dyck proved an amateur tree-trimmer a 50-foot tree at his home in Omaha. He cut off the branches as he so desired. Reaching the top he had nothing to cling to in getting back to terra firma, and assisted by his efforts, called the fire department to rescue him with a ladder.

Somebody defines a genius as a person whose mind doesn't go blank when he's asked to write something original, although he's no damn good. You should see some of the stuff alleged geniuses write there.

Fall Seedling Satisfactory

Given Good Stand Of Cereals Wheat Grass On Prairies

Although early spring seeding of cereal wheat grass on clean land in the prairie provinces usually gives the best results, numerous tests have demonstrated that a stand may be established satisfactorily by seeding in the fall of the year. In the booklet, "Growing Cereals Wheat Grass for Seed Production," issued by the Dominion Department of Agriculture, T. M. Stevenson and W. J. White of the Dominion Forage Crop Laboratory at Saskatoon, state that fall seedings have the advantage of being less likely to be injured by soil drifting and insect pests. In addition, the grass makes sufficient growth to permit early cultivation to control weeds in the following spring. Seedlings made in early September on well-prepared fallow land have been most successful, and fall seedings have over a period of years have never shown any tendency towards winter killing.

Stands of cereal wheat grass established through fall seedings normally produce a fair seed crop the following year, but yields of seed are always somewhat smaller than those from spring seedings made in the same area. One important point, noting in spring or fall seeding, to shallow seeding. The seed should not be covered by more than one-half inch of soil, and seedling in the field is possible only if the seed-bed is kept in good condition before seeding is one of the best means of avoiding over-deep seedings and the consequent loss of seed.

The booklet which is issued free on request by the Publicity and Extension Branch, Dominion Department of Agriculture, Ottawa, contains information gained from actual experience over a number of years under a wide range of soil and climatic conditions. Soil preparation, time, method, and depth of seeding, care and attention during the first year, when and how to harvest, curing and handling, threshing, and cleaning the seed are the main subjects dealt with in detail.

Diakie Sember Colors

Vincent Holmsted Says Piles Associate Light With Sweetness

If you want to be spared the nuisance of flies, have sember valances and use dark covers for your furniture, says Hans Frantz, noted Vienna physician.

Frantz explains that the flies through many thousand years, have been accustomed to associate sweetness with light colors. In contrast to butterflies, which prefer red and blue flowers, and to bees, which like purple and dark yellow ones, flies only seek homes on flowers of light colors.

Flies cannot, or tend hardly, perceive any colors aside from white, grey, or a light blue, according to the scientist, who asserts that a fly will never be found on a dark curtain or on a red rose.

Frantz says he has been attracted by light colors and shining surfaces such as mirrors and windows, and for this reason white flypaper should be used by preference. Frantz, therefore, advises use of dark curtains, wall paper, furniture and to painting stings in dark tints.

Three Tons Of Honey

Found In World's Biggest Natural Beehive In Australia

The world's biggest natural beehive, weighing nearly a ton and yielding more than three tons of special medicinal honey, has been found in an island Australian forest.

Situated in the top of a giant eucalyptus tree, the hive was the home of myriads of Tasmanian black bees, shaped like the usual hive fly, but 21 feet across and is more than 35 feet high. The honey, it sold, was valued at nearly \$2,000.

The only hive believed to be larger is the artificial bee palace kept by Dr. James' Bees, in a Chester, England, where the ship the hive are 7,000,000 bees, kept only for experimental purposes. Dr. Bees is a distinguished biologist who has written many books on bees, their behavior and their work.

Worth Millions To Farmers

Grasshoppers destroyed now threaten over a solid block of 150 townships, many recently four on the banks of the L'Ange River, a half mile north from the international boundary to British Columbia, and on the west by a river running roughly from Moose Lake, Manitoba. The eradication is estimated worth \$15,000,000 to farmers.

A robot mannequin in a London departmental store window picks up frisks one by one and showing both front and back, displays about 24 dresses in 12 minutes.

Has Great Possibilities

Use Of The Trailer Is Increasing In Popularity

The announcement that one of the large automobile companies—the Chevrolet—will begin the production of trailers within a few weeks is a signal that the trailer has arrived. It is not a new invention; but it is only within the last two years or so that it has become really popular and that its possibilities have been recognized. For long time motor trailers were home-made affairs; recently the demand has been supplied by some 100 manufacturers. The largest of these add 400 to 1000 and has a production schedule this year of 10,000.

They are owned for a large variety of reasons: to see the country, to save hotel bills, to live in Maine in the summer and Florida in the winter, to enable one member of the family to take a nap while the other makes a drive to camp, real estate taxation and State income taxation.

Ordinary trailers cost from \$200 to \$1,200; they can be bought for as little as \$100, or as much as \$25,000. Those who have the cheaper trailers are known as "cheapies" and will be surprised to learn that the more elaborate ones are veritable land yachts. It is estimated that a trailer will live in one for 12 to 15 years. They are equipped with electric lights, ice chests, stoves, showers, chests of drawers, chests, berths that make up the Pullman sleepers in the daytime. Florida has been complete in itself and allows the motor trailers to use electric connections, running water and sewage disposal for very moderate fees.

Travelling in a trailer is just beginning to be recognized. No doubt migratory workers will use them. The trailer is a new way of living from towns where opportunities are falling to towns where they are rising, and to those where they are rising, and to those where they are rising, and to those where they are rising.

Meanwhile a new industry is growing up—New York Times.

Deserve The Best

English Speaker Flies In Good Word For Country Women

"There is nothing too good for the countrywomen," Mrs. Alfred Wait, M.P., president of the Associated Countrywomen of the World, told delegates to the convention of Women's Institutes in London, England.

"City women expect too much from country women," she continued. "They think they ought to supply them with cheap food and often the only return they make is to litter up countryside with plastic debris."

The Associated Countrywomen of the World include nearly one hundred free and independent large organizations, which may be found through a central office in London, England.

Mrs. Wait thought farm boys and girls should not only be educated for agriculture. They should first be as literate in the subjects such as literature, history and geography, and after that given whatever training suited their particular abilities.

Wait has been slowly on a trip around the world. She has been invited to visit the Women's Institutes in New Zealand, Australia and India.

Burial Of Britannia

Fencing Of Royal Yacht Reminds Of Nosed Kings

The burial of Britannia has a royal touch in it, and if it reminds one of the olden kings, whose loved carriages were slain and buried with them, who can object? A yacht is nearly as cherished as a royal horse. With the Norse sea kings, indeed, it was their ships rather than their horses which they took with them. Some were buried aboard in their "long ships," others were laid upon the towers, the sails and the masts. In the same manner, the ship that was to bear their master with them to St. James' burial at sea. A faint shadowy reflection of these ancient practices seems to illuminate Britannia's passing—New York Herald Tribune.

Prehistoric Discovery

Remains of a prehistoric animal, identified as those of a mastodon, were recently found on the banks of the L'Ange River, a half mile north from Marianne, Ark., by W. J. Travis of Marianne. The skeleton of the early creature, the elephant was discovered after heavy rain storms had caused the banks of the river to cave.

"I advertised that the poor are made welcome in this church," announced the minister, "and as the offering amounts to 80 cents, I see that they have come."

SMOOTH STOKES

Buckingham Fine Cut

MILD · COOL · SMOOTH

WORLD HAPPENINGS BRIEFLY TOLD

George Simpson, 60, formerly well known in newspaper circles and editor of House of Commons Debates, died in hospital at Ottawa.

Civil census figures give Edmonton's population as 50,470, an increase of 4,000 over last year. It is the highest population figure in the city's history.

As an offering on the altar of road safety, 58 decrepit motor cars, valued at \$7,500, were set on fire and burned into twisted scrap of metal at Cape Town, S.A.

The Soviet Union is turning out about 5,000 aeroplanes a year in a gigantic building program, Louis Bruegel, French builder, said upon his return from a trip to Russia. Estimated to have been buried nearly two centuries ago, a skeleton of an Indian was unearthed at Mount Hope cemetery in Brantford, Ont., by workmen.

Farmers of southern Alberta are holding their breath while back from market, awaiting higher prices, a survey revealed. Delinquents to line elevators are far below average.

Highland Park, historic Buckinghamshire estate which was the home of Benjamin Disraeli, has been bought by High Wycombe Borough Council as a memorial to King George.

There is to be no hiding place for the bushwinder under the Italian flag. A decree published entitled to East Africa a fee of \$2.50 a year on landholders between 25 and 30 years old and about \$12.00 on those up to 65 years.

Crash on C. H. Kewee, the Royal Air Force pilot who landed on the liner Normandie in Southampton Docks on June 22, was severely injured by a court martial and sentenced to re-education.

Had Struggle With Grizzly

Mountain Climbers in Rockies Attacked by Mother Bear

The story of a struggle with an enraged mother grizzly bear protecting her cub in Interior British Columbia was related by Mr. and Mrs. Don Munday, Altnaharra, near Vancouver from an expedition trip in the Coast Range.

As they completed a hazardous passage through a 15-foot crevice in Bearpaw canyon, Mount Silverthorne, the Mundays related, they looked down on a grizzly cub standing apparently alone.

Discarding their ice-axes, they focused their cameras on the cub but before they could take a picture the roar of the mother grizzly distracted their attention.

She was standing on the snow ledge as they 20 feet away.

Unhappily, the Mundays began to yell but the mother bear started her advance. About a yard away she snarled off but came back a moment later more fiercely than ever.

Finally Mrs. Munday succeeded in recovering one of the axes and, as the bear made a rush at Mr. Munday, causing him to trip, she rushed at the bear with up-raised axe and drove it off.

Ownership Not Known

No Rent Paid For Six-Fat Building in Chicago

For at least 10 years, 81-year-old William Thak told Judge McCarthy, none of the tenants in the six-story building in Chicago where he lived paid any rent—because nobody knew who owned it.

But Mrs. Delphina Lance charged Thak posed as the owner and tried to have her evicted for non-payment of rent.

When she admitted he was not the owner and didn't know who was, Judge McCarthy fined him \$100 and ordered an investigation of the mystery building.

City Of The Future

A city of the future, designed for airplanes and automobiles, commuters, with streets radiating from the centrally located airport, is envisioned by Dr. Ludo L. Zimmer, noted industrial engineer of Cleveland, Ohio.

The populace devours his own weight in fish about every 48 hours.

Was Once Zulu Queen

Aged Woman Now Lives In Rhodesia On Small Farmstead

Wise, bent and poorly clad, but not without traces of royal dignity, a one-time queen has been listening to a native missionary conference at Bulawayo in Southern Rhodesia. Her name is Macobese, once one of the superior wives, or queens, of Lobengula, last King of the Matabele.

A little over 40 years ago the slightest whim of Queen Macobese was law to whole regiments of plumed warriors. Today, with a middle-aged daughter, she lives on a small pension granted by the Rhodesian Government.

Behind her faded but imperious old eyes and deeply furrowed face are memories that would make a score of books.

It was to Queen Macobese's father, Gungunyana, that Dr. Jameson made his famous journey in 1891 through forest and swamps to secure a concession over Zululand to obtain a seaboard for what is now Southern Rhodesia. Dr. Jameson obtained the concession and permanently undermined his health in the doing, but the spread of Christianity followed and today Rhodesia remains an inland State while the Portuguese rule over Zululand.

The days of native wars, raids for women and cattle, the ritual execution of wizards, and the barbaric splendour of the last great Matabele warrior-king, died with Macobese's husband. Today her chief interest is the spread of Christianity amongst the black races who were once the subjects of Lobengula—the Terrible in War.

We are told of a machine with a human brain. And then there are humans with the brains of machines!

You'll Crochet Your Way to Flattery

PATTERN 5679—With this fetching, easily-made blouse of colored yarn. And if it's a smart "two-piece" your wardrobe needs, under pattern 5583—a trim skirt of plain crochet. This engaging blouse with its graceful jabot is open net stitch is made entirely in the simple lace stitch shown in the detail. Quickly made! This outfit! In pattern 5679 you will find instructions for making the blouse shown with long of short sleeves in sizes 16-18 and 20-22 (all given in one pattern); an illustration of it and of all the stitches needed; material requirements; page 20 cents.

To obtain these patterns send 20 cents each (40 cents for both) in stamps or cash—sent to Household Arts Dept., Winning News-Page 77015, 15 McCormick Ave., N. Winnipeg.

There is no Alice Brooks pattern book published.

Working To Music

English Motor Company Finds It Quicker Cheaper Atmosphere

Music has many uses outside of the field of amusement and entertainment. It has been said that music has the power to soothe the savage beast; that blasts from a trumpet of minor chords will cause a frenzied lion of turn tail; that music at the proper tempo will induce pupils in school to do better writing.

The Standard Motor Co., Limited, Canby, Coventry, England, one of the largest automobile manufacturers in that country, has found that the broadcasting of music in part of their factory has had a beneficial effect on the spirit of the workers, has created a cheerful atmosphere, and has caused no deterioration in efficiency and careful workmanship.

—Oshawa Times.

International Trade

Australians Politely Refuse It Best Prevention of War

The best prevention of war, Sir Rollo Murdoch said in an interview at Montreal, would be a lot of trade barriers and a general move to make international trade more accessible. "The Australian is a laborer, on his way home after a trip through Spain, France, Germany and England, said "some of the best brains in England are working on a policy of bank credits for nations which are hard up and the freeing of certain channels of trade in the hope there will be a substantial revival of trade by this means."

A Hartford, Conn., luncheon avers: "Don't divorce your wife if she can't cook. Eat here and save her a job."

Canadians Small Meat Eaters

Average For New Zealand And Australia Much Higher

The average Canadian family uses three times as much milk as the average New Zealand family, but, on the other hand, it uses less butter and cheese and about half as much meat.

Although the people of this somewhat cold northern country would really be expected to eat a good deal of meat, the average amount consumed per person is only 137 pounds a year, while the average used per person in New Zealand and Australia, both with milder climates than Canada's, is 247 pounds and 213 pounds respectively. Our Antipodean cousins should be good at heavy work and at sports that test the athlete's strength.

The above facts are taken from statistics published by the New Zealand government, which also show that New Zealanders better their bread more thickly than do the people of Great Britain, Australia or Canada, but that when it comes to eating cheese our friends in Britain take first place. The average consumption there is 94 pounds per year, as against 35 in Canada.

We eat only half as much beef, relatively, as the people of Australia and Canada. The average Canadian uses only one fraction of the amount of pork as found in consumption in the southern Dominion, but Canadians are fond of pork, ham and bacon. We eat 25 pounds per person, as against 17 pounds in New Zealand, 10 pounds in Australia and 46 pounds in Britain. Canadians also have a taste for poultry and eat a good deal more than the New Zealanders.

Just how we compare in regard to potatoes and spinach the story does not tell.—Winnipeg Free Press.

Air-Conditioned Rooms

Will Definitely Ensure Better Work In Hot Weather

You can do better work in air-conditioned rooms in hot weather. You can count on such a room to reduce costs at any season.

These are applications of air conditioning to normal life, presented at the Harvard tercentenary celebration in a symposium on environment by Philip Drinker, professor of industrial hygiene at the Harvard school of health.

"Will we have fewer colds," Prof. Drinker asked, "if we control the humidity in our homes? Will we miss the air, or if we sterilize it with ultra-violet light? It would be pleasant to answer these questions positively, but at the present time there are no data from any source which we have seen, which justify affirmative answers."

Expected Too Much

She said dreamily to him: "Yes, I could love a poor man." He asked her: "Then why not marry me?" She answered: "But I could not love a poor man enough to have the alarm clock wake me out of pleasant dreams to get up and make his coffee and fry an egg before he went to work every morning." And he said rudely: "Who said anything about there being an egg in fry?"

EDMONTON "GRADS" HOME AFTER SUCCESSFUL EUROPEAN TOUR

The famous Edmonton "Grads" basketball team, generally conceded to be the finest aggregation of female basketball players in the world, has just returned to Canada after a successful "tour" of Europe and the Mother Country. Standing on the sidewalk "sideline of Britain" as she dashed at Quebec, the members of the team are (from row, left to right), Helen Mottishaw, Doris Hulse, Babe Hulse and Rita Dunn. (Back row, left to right), Sophie Brown, Mabel Burton, Gladys Joy, J. P. Page, the well-known manager of the team, and Noel Macdonald. The girls are wearing their Olympic blazers.

I'M LIMP AS A RAG... FROM RUBBING AND SCRUBBING

YOU'D SAVE LOTS OF HARD WORK IF YOU USED GILLETTE'S EYE

WASHES DIRT AWAY —no rubbing and scrubbing

Cleaning jobs are quick and easy with Gillette's Pure Flake Eye. Use a solution of 1 teaspoonful dissolved in a quart of cold water. Off comes the dirt! And you do no hard rubbing. Use it for toilet bowl, too—and to clear sluggish drains. It kills germs, destroys odors, never harms enamel or plumbing. Get a tin from your grocer—today!

Never dissolve Eye in hot water. The action of the Eye itself heats the water.

FREE BOOKLET—The handy Gillette Eye Booklet shows how this powerful, cleaner and disinfectant can save you hard work... contains complete instructions on using eye or home... tells how to keep farm equipment and buildings clean and sanitary. Be sure to send for free booklet: Send 2 stamps to Gillette Bros. Ltd., Boston Ave. & Liberty St., Toronto, Ont.

World Speed Record

Made By Stream-Lined Jubilee Express In England

The stream-lined silver Jubilee express of the London and North-Eastern railway, running from Newcastle-on-Tyne to London, established a new speed record for British trains by reaching a maximum speed of 113 miles an hour.

The train, excluding the engine, passengers and baggage, weighed 279 tons. The figure is believed to be a new record for a streamlined passenger train.

Plant Out Of Place

A weed may be described as a plant out of place; by its unsightly appearance, its pernicious habits of growth, method of spreading by root stocks and seed, it becomes a real menace to agriculture regardless of whether it is growing on highways, by-ways, public or private property.

Letters Being Censored

Letters addressed in Spain. It is learned in London, are being opened and censored. Correspondents therefore are advised to omit any inflammatory comments which might prove dangerous to the people to whom the letters are addressed.

Local Items**

John Ruskin, of Olds, is spend
ing this week here visiting his
daughter Mrs. S. Schneider.

Mrs. Reid, of Winnipeg is at
present visiting her sister Mrs.
E. L. Stone.

A Masonic district meeting
for District No. 2 will be held in
Medicine Hat this afternoon
and evening.

Mr. John Fitzhenry, of Min-
neapolis, arrived in town last
Monday on a visit to his brother
Mr. G. W. Fitzhenry.

The Masonic District Meeting
is being held in Medicine Hat
this afternoon and evening. A
number from Redcliff will at-
tend.

Listen to the Alberta Wheat
Pool radio program every Sun-
day evening, from 5.30 to 6.00
station CICA Edmonton, CFAF
Calgary and CJOC Lethbridge.

Mr. Bert Allison received ad-
vice last Saturday announcing
the sudden death of his brother,
Ernest, who met with an acci-
dent which proved fatal. Deceased,
who was maimed from childhood,
got about in a tricycle and
while going along a wart he lost
control of the vehicle and fell
into the ocean and was drowned.

There has been much heard
and read about black widow
spiders recently and the Review
now has one on exhibition. The
widow was caught in a garbanc
in town by Keith Ellis, who
brought it to this office. The
identical if the widow was quick-
ly noticed by the familiar red
dot on the under side of its
body and its shiny black color.
We have no desire, however, to
experiment or flirt with a widow
in ider.

LEUNG BROS.

Fourth St. Next Town Hall

Mr. S. Schneider is making
preparations for the erection of
a residence on the lots next his
garage on Third St.

Trig Bjorndal, an old timer of
the Wild Horse district, was
found dead on the road last Sun-
day with a bullet in his head.
It is thought he met with an
accident.

Mr. A. Brydle who has con-
ducted a blacksmith shop here
for a number of years and has
served several terms on the town
council left Tuesday for Creston
B.C. where he owns some choice
farm property. It is his inten-
tion to commence farming op-
erations on his farm and will reside
there in future.

Mrs. Brydle and family are
remaining here for the present
as John and Muriel are attend-
ing school.

NOTICE

Owing to the increased activity
in Medicine Hat this week
end, the Legion Dance Com-
mittee have found it impossible to
engage an orchestra worthy of
rendering music befitting such
an occasion. Therefore they
have decided to postpone the
Dance and Dinner until October
9th, at which time a HIGHER
and BETTER DANCE will be
held.

The Committee**IN LOVING MEMORY**

Of Ellen Bardell our dear
mother, who passed away on
Monday Sept. 20th 1935.

Alight has from our household
gone.

A voice we loved is still'd,
A place is vacant in our home,
Which never can be filled.
From her sons and daughter
Emma, Ted and Harry.

IN LOVING MEMORY

In loving memory of Miles
Kerby Gillbanks who died Sept.
24th, 1935.

What would we give his hand to
clasp,

His patient face to see

To hear his voice, to see his smile

As in the days that used to be

Ever remembered by his

father, sisters and brothers, and

dear friend Mrs. Richardson.
